

## Train Operations

June 2016

**We are the most revolutionary, innovative and unique train operating company in the UK.**

**Revolutionary** because, unlike all other operating companies, we are not here to compete with the freight sector or enter the world of franchised or open access passenger operation. We are here however to provide a supporting role to the UK rail industry, in particularly, the rolling stock engineering and train operating communities.

**Innovative** because, as well as operating trains, we provide our industry clients with a range of supporting services. What enables this is our unique operating model that comprises three distinct, yet intrinsically linked, business units, namely:

- 1) Train Operations ... including train driver hire
- 2) Management Services ... the 'Consultancy' arm of Rail Operations Group
- 3) Training & Development.

**Unique** because we are the only train operating company who:

- is not distracted by other train operating requirements allowing us to be dedicated to the needs of the rolling stock community
- appoints a Director as the account manager and direct point of contact to ensure programme reliability and resilience for our clients
- provides appropriately qualified Operations Managers to undertake our train driving requirements.

Specialising in train movements relating to delivery, testing, maintenance, modification and refurbishment programmes, our team of experienced industry specialists offer unrivalled expertise. Our operation is specifically designed to undertake the movement of traction and rolling stock in connection with:

- new build deliveries
- new build testing and mileage accumulation
- fleet maintenance, modification or refurbishment programmes
- fleet cascade or transfer programmes
- vehicle / fleet testing (eg, ETCS fitment)
- infrastructure-train interface testing
- redundant / off-lease stock for storage
- passenger (ECS) movements
- ad-hoc freight or engineering rolling stock movements.

So whether it's operating trains, supporting challenging programmes (eg ERTMS), commissioning new rolling stock, project management support or hiring/training drivers, we have a solution for you. To find out more about the solutions we offer, please contact ...
