

## Operations and Vehicle Compliance Come Together

20 July 2015

Rail Operations Group (ROG) is very pleased to announce that it has joined forces with Technical Construction Limited (TCL).

TCL is an engineering service consultancy offering a range of rail vehicle engineering services to the UK rail industry. This partnership allows ROG to add a range of technical rolling stock services, including vehicle compliance, to its expanding range of services. See below for more details.

### ROG Adds Vehicle Compliance to its Range of Services

We are now able to offer vehicle compliance certification including registration and change of vehicle data on the Rolling Stock Library and the National Vehicle Register.

With our experienced engineering associates, we can provide services formerly provided by the Vehicle Acceptance Bodies for a wide scope of activities. Whether it is simple changes to maintenance regimes, significant fleet modifications or a one-off trial that requires evaluation in real service, we can ensure that you meet all of the legislative and regulatory requirements for operations on the UK rail network and beyond. This service compliments our specialist train operations provision and enables the Rail Operations Group to truly support your engineering projects.

This additional range of services has been made possible by the newly established partnership with Technical Construction Limited (TCL).

In what is another innovative move by ROG, this takes the company a further step towards becoming the supplier of choice for rail vehicle movements across the UK rail network.

### All Systems Translate!

As well as the continued use of class 57/3 locomotives for its class 375 Electrostar contract, ROG entered the world of translator vehicle operation this month.

ROG successfully completed the movement of a class 321 EMU from Ilford to the Old Dalby Test Track for Vossloh and a further class 321 EMU movement from Northampton to Doncaster for Eversholt.
